		Register No.
<b>THIRD SEMESTER UG DEGREE EXAMINATION, NOVEMBER 2025</b>		
<b>(CUFYUGP)</b>		
<b>MAT3MN205</b>		
<b>Optimization Techniques</b>		
<b>2024 Admission Onwards</b>		
<b>Maximum Time :2 Hours</b>		<b>Maximum Marks :70</b>

<b>Section A</b>	
<b>All Question can be answered. Each Question carries 3 marks (Ceiling: 24 Marks)</b>	
1	Write the General Linear Programming Problem
2	Which are the characteristics of Graphical method?
3	Define Surplus variable in Linear Programming. Give an Example
4	Write the following linear programming problem in Simplex format <b>Maximize <math>Z=3a+2b+4c</math> Subject to</b>  $3a + 4b - 5c \leq 3, \quad a - 2b - c \leq 1, \quad 2a + b \geq 2, \quad a, b, c \geq 0$
5	Explain the situation when Big-M method used in Linear Programming Problems.
6	How can we solve Degeneracy in Linear Programming Problems
7	Why is the transportation model considered a special type of linear programming problem?
8	Write different methods to get Basic feasible solution and also for optimality test in transportation model.
9	Explain loaded cells and empty cells in transportation matrix
10	Write the difference in allocation between North – west corner method and least cost cell method

**672292**

## Section B

672292

All Question can be answered. Each Question carries 6 marks (Ceiling: 36 Marks)

11	<p>Draw the feasible area of the following constraints.</p> $x + 2y \leq 3, \quad 2x - y \leq 0, \quad 3x + 4y \leq 12 \quad x, y \geq 0$																				
12	<p>Using graphical method,</p> <p><b>Maximize</b> <math>2x + y</math></p> <p>subject to</p> $x - 2y \geq 2, \quad 2x + 4y \leq 8 \quad x, y \geq 0$																				
13	<p>Solve by Simplex Method</p> <p><b>Maximize <math>Z=3a+2b</math></b> Subject to</p> $a - 3b \leq 6, \quad a + 5b \leq 10, \quad a, b \geq 0$																				
14	<p>Solve the LPP by Big-M Method</p> <p>Maximize <math>x + 5y</math> subject to.</p> $x + y \leq 3, \quad y \geq 8, \quad x, y \geq 0$																				
15	<p>A company manufactures two product A and B. These are machined on machines X and Y. A takes one hour on machine X and one hour on Machine Y. Similarly product B takes 4 hours on Machine X and 2 hours on Machine Y. Machine X and Y have 8 hours and 4 hours as idle capacity. The planning manager wants to avail the idle time to manufacture A and B. The profit contribution of A is Rs. 3/- per unit and that of B is Rs.9/- per unit. Find the optimal product mix.</p>																				
16	<p>Solve the following transportation model</p> <table><tr><td></td><td><math>D_1</math></td><td><math>D_2</math></td><td><math>D_3</math></td><td>Supply</td></tr><tr><td><math>S_1</math></td><td>8</td><td>6</td><td>10</td><td>20</td></tr><tr><td><math>S_2</math></td><td>9</td><td>7</td><td>4</td><td>30</td></tr><tr><td>Demand</td><td>10</td><td>25</td><td>15</td><td>50</td></tr></table>		$D_1$	$D_2$	$D_3$	Supply	$S_1$	8	6	10	20	$S_2$	9	7	4	30	Demand	10	25	15	50
	$D_1$	$D_2$	$D_3$	Supply																	
$S_1$	8	6	10	20																	
$S_2$	9	7	4	30																	
Demand	10	25	15	50																	

672292

17	Three factories $F_1, F_2, F_3$ supply four warehouses $W_1, \dots, W_4$ . Supply, demand and unit transportation costs (in Rs.) are: <table><tr><td>Factory</td><td><math>W_1</math></td><td><math>W_2</math></td><td><math>W_3</math></td><td><math>W_4</math></td><td>Supply</td></tr><tr><td><math>F_1</math></td><td>4</td><td>6</td><td>8</td><td>5</td><td>8</td></tr><tr><td><math>F_2</math></td><td>7</td><td>3</td><td>4</td><td>2</td><td>9</td></tr><tr><td><math>F_3</math></td><td>5</td><td>9</td><td>1</td><td>6</td><td>7</td></tr><tr><td>Demand</td><td>5</td><td>8</td><td>6</td><td>5</td><td></td></tr></table> Find the Optimal Solution for least cost transportation cost.
