Features

24 Flexible and Efficient MMC Digital Twin Realized With Small-Scale Real-Time Simulators

Stefan Milovanovic, Ignacio Polanco, Milan Utvic, and Drazen Dujic

34 Assessing Short-Circuit Robustness of 1200 V SiC MOSFETs: Using Deep Structural and Physical Analysis

Alberto O. Adan, Yusuke Takagi, Seiji Takeuchi, Lajos (Louis) Burgyan, and Yuji Kakizaki

44 Power Electronics and Drives: Simulation to Implementation in Minutes

A novel implementation tool for power engineers
Yogita P. Akhare, Warsame H. Ali, John H. Fuller, and John O. Attia

53 Practical Considerations for Design and Layout of High Power Digital PCBs

Reliably powering complex multilayer digital printed circuit boards
Mikhail Guz

60 Reliability of Silicon Battery Technology and Power Electronics Based Energy Conversion

Sandra Hansen, Frederik Hahn, Helge Krüger, Felix Hoffmann, Markus Andresen, Rainer Adelung, and Marco Liserre

On the cover

For high-power modular multilevel converters, real-time hardware-in-the-loop systems are widely adopted for commissioning and testing of control software.
